AMENDMENTS TO THE CLAIMS

Please amend the claims of the present application as set forth below. In accordance with the PTO's revised amendment format, a detailed listing of all claims is provided. A status identifier is provided for each claim in a parenthetical expression following each claim number. Changes to the claims are shown by strikethrough (for deleted matter) or underlining (for added matter).

Claims 3, 4, 6-12, 15-22 and 25-30 were pending at the time of the Office Action.

Claims 3, 4, 6-12, 15-22 and 25 are expressly allowed.

Claims 26 and 28-30 are rejected.

Claim 27 is objected to.

Claims 27-30 are amended by the current response.

Claim 26 is canceled by the current response.

Accordingly, claims 3, 4, 6-12, 15-22, 25 and 27-30 remain pending.

1. (Previously Canceled)

2. (Previously Canceled)

3. (Previously Amended) A computerized method for key-based secure storage comprising:

downloading information and an access predicate that specifies requirements for an application to access the information;

generating a seed value;

1 producing a hash seed value based on the seed value using a one-way hash
2 function;

3 generating an application storage key from the hash seed value;

4 encrypting the information using the application storage key; and

5 associating the access predicate with the encrypted information.

6
7 4. (Previously Amended) A computerized method for key-based
8 secure storage comprising:

9 downloading information and an access predicate that specifies
10 requirements for an application to access the information;

11 generating a seed value;

12 producing a first hash seed value based on the seed value using a one-way
13 hash function;

14 producing a second hash seed value based on the seed value and a user
15 identifier using a keyed hash function;

16 generating a user storage key from the second hash seed value;

17 encrypting the information using the user storage key; and

18 associating the access predicate with the encrypted information.

19
20 5. (Previously Canceled)

21
22 6. (Previously Amended) A computerized method for key-based
23 secure storage comprising:

24 downloading information and an access predicate that specifies
25 requirements for an application to access the information;

1 obtaining a storage key;
2 encrypting the information using the storage key;
3 associating the access predicate with the encrypted information;
4 obtaining an operating system storage key;
5 encrypting the access predicate with the operating system storage key; and
6 encrypting a plurality of other storage keys using the operating system
7 storage key, wherein the other storage keys are selected from the group consisting
8 of application storage keys and user storage keys.

9
10 7. (Previously Amended) A computerized method for key-based
11 secure storage comprising:

12 downloading information and an access predicate that specifies
13 requirements for an application to access the information;
14 obtaining a storage key;
15 encrypting the information using the storage key;
16 associating the access predicate with the encrypted information;
17 generating a seed value;
18 generating an operating system storage key based on the seed value; and
19 encrypting the access predicate with the operating system storage key.

20
21 8. (Previously Amended) A computerized method for key-based
22 secure storage comprising:

23 downloading information and an access predicate that specifies
24 requirements for an application to access the information;
25 generating a seed value for the application;

1 producing an application hash seed value based on the seed value for the
2 application using an application-specific one-way hash function;
3 generating an application storage key from the application hash seed value;
4 generating a seed value for a user;
5 producing a first user hash seed value based on the seed value for the user
6 using a one-way hash function;
7 producing a second user hash seed value based on the first user hash seed
8 value and a user identifier using a keyed hash function;
9 generating a user storage key from the second user hash seed value, the
10 application storage key and the user storage key to encrypt information containing
11 a portion specific to an application and a portion specific to the user;
12 encrypting the information using the application storage key and the user
13 storage key; and
14 associating the access predicate with the encrypted information.

15
16 9. (Previously Amended) A computerized method for key-based
17 secure storage comprising:

18 downloading information and an access predicate that specifies
19 requirements for an application to access the information;
20 obtaining a storage key;
21 encrypting the information using the storage key;
22 associating the access predicate with the encrypted information;
23 storing the storage key in a key vault provided by a third-party; and
24 recovering the storage key from the key vault.
25

1 10. (Original) The computerized method of claim 9, wherein
2 recovering the storage key comprises:

3 requesting recovery of the storage key; and

4 providing information to the third-party to enable validation of the request.
5

6 11. (Previously Amended) The computerized method of claim 9,
7 further comprising:

8 selecting the key vault from a plurality of key vaults provided by a trusted
9 operating system.
10

11 12. (Previously Amended) The computerized method of claim 9,
12 further comprising:

13 selecting the key vault designated by a provider of the information.
14

15 13. (Previously Canceled)
16

17 14. (Previously Canceled)
18

19 15. (Previously Amended) A computer system comprising:

20 a processing unit;

21 a system memory coupled to the processing unit through a system bus;

22 a computer-readable medium coupled to the processing unit through a
23 system bus;

24 a generate key function executed from the computer-readable medium by
25 the processing unit, wherein the generate key function causes the processing unit

1 to generate an operating system storage key based on an identity for the operating
2 system and based on a seed.

3
4 16. (Previously Amended) A computer system comprising:
5 a processing unit;
6 a system memory coupled to the processing unit through a system bus;
7 a computer-readable medium coupled to the processing unit through a
8 system bus;

9 a generate key function executed from the computer-readable medium by
10 the processing unit, wherein the generate key function causes the processing unit
11 to generate an operating system storage key based on an identity for the operating
12 system;

13 an application specific one-way hash function executed from the
14 computer-readable medium by the processing unit, wherein the application
15 specific one-way hash function causes the processing unit to generate an
16 application storage key from a hashed seed; and

17 a generate application key function executed from the computer-readable
18 medium by the processing unit, wherein the generate application key function
19 causes the processing unit to generate the hashed seed from an application seed.

20
21 17. (Previously Amended) A computer system comprising:
22 a processing unit;
23 a system memory coupled to the processing unit through a system bus;
24 a computer-readable medium coupled to the processing unit through a
25 system bus;

1 a generate key function executed from the computer-readable medium by
2 the processing unit, wherein the generate key function causes the processing unit
3 to generate an operating system storage key based on an identity for the operating
4 system;

5 a key-hash function executed from the computer-readable medium by the
6 processing unit, wherein the key-hash function causes the processing unit to
7 generate a user storage key from a hashed seed and an identity for the user;

8 a one-way hash function executed from the computer-readable medium by
9 the processing unit, wherein the one-way hash function causes the processing unit
10 to generate the hashed seed from a previously hashed seed; and

11 a generate user key function executed from the computer-readable medium
12 by the processing unit, wherein the generate user key function causes the
13 processing unit to generate the previously hashed seed from a user seed.

14
15 18. (Previously Amended) A computer system comprising:
16 a processing unit;
17 a system memory coupled to the processing unit through a system bus;
18 a computer-readable medium coupled to the processing unit through a
19 system bus; and

20 a trusted operating system executed from the computer-readable medium by
21 the processing unit, wherein the trusted operating system causes the processing
22 unit to encrypt downloaded information using a storage key based on a seed
23 value.

1 19. (Previously Amended) The computer system of claim 18,
2 wherein the trusted operating system further causes the processing unit to encrypt
3 an access predicate associated with the downloaded information using an
4 operating system storage key, to encrypt the seed value for the storage key using
5 the operating system storage key, and to associate the encrypted access predicate
6 with the encrypted seed value.

7
8 20. (Previously Amended) The computer system of claim 19,
9 wherein the trusted operating system further causes the processing unit to validate
10 each application requesting access to the downloaded information using the access
11 predicate, and decrypts the seed value for use by a validated application.

12
13 21. (Previously Amended) The computer system of claim 18,
14 wherein the storage key used to encrypt the downloaded information is specific to
15 an application.

16
17 22. (Previously Amended) The computer system of claim 18,
18 wherein the storage key used to encrypt the downloaded information is specific to
19 a user.

20
21 23. (Previously Canceled)

22
23 24. (Previously Canceled)

1 25. (Previously Added) A computerized method for key-based secure
2 storage comprising:

3 downloading information and an access predicate that specifies
4 requirements for an application to access the information;

5 obtaining a storage key;

6 encrypting the information using the storage key;

7 associating the access predicate with the encrypted information;

8 storing the storage key in a key vault provided by a third-party;

9 recovering the storage key from the key vault; and

10 selecting the key vault from a plurality of key vaults provided by an
11 authenticated operating system.

12
13 26. (Currently Canceled)

14
15 27. (Currently Amended) A computer system comprising:

16 a processing unit;

17 a system memory coupled to the processing unit through a system bus;

18 a computer-readable medium coupled to the processing unit through a
19 system bus; and

20 an authenticated operating system configured to execute on the processing
21 unit from the computer-readable medium; the authenticated operating system
22 causing the processing unit to encrypt downloaded information using a storage key
23 based on a seed value;

24 ~~The computer system of claim 26,~~ wherein the authenticated operating
25 system further causes the processing unit to encrypt an access predicate associated

1 with the downloaded information using an operating system storage key, to
2 encrypt the seed value for the storage key using the operating system storage key,
3 and to associate the encrypted access predicate with the encrypted seed value.
4

5 28. (Currently Amended) The computer system of claim ~~26~~ 27,
6 wherein the authenticated operating system further causes the processing unit to
7 validate each application requesting access to the downloaded information using
8 the access predicate, and decrypts the seed value for use by a validated
9 application.
10

11 29. (Currently Amended) The computer system of claim ~~26~~ 27,
12 wherein the storage key used to encrypt the downloaded information is specific to
13 an application.
14

15 30. (Currently Amended) The computer system of claim ~~26~~ 27,
16 wherein the storage key used to encrypt the downloaded information is specific to
17 a user.
